Dear Esther,

I would like to take this opportunity to thank you for recommending the ozone device to my company. As our company is dealing with training and publication, we have lots of sets and modules training materials like video tapes, vcd and books. We have been always experiencing some moulds problem over the years for our training materials as the air and ventilation are no good in the office.

Thereafter we bought and installed the QL2 in the office to take away the moisture and improve the quality of the air in our enclosed air-conditioning office, we are happy and satisfied that after using the QL2 device, it has tremendously reduce our mould problem and we are happy having the ozone device as a solution to our problem.

Thank you very much.
